TASK – 6

Bank Ride Sharing Platform Simulator Using Java

PROGRAM :

```
import java.util.Scanner;

public class RideSharingSimulator {
   public static void main(String[] args) {
      Scanner sc = new Scanner(System.in);

      System.out.print("Enter passenger name: ");
      String name = sc.nextLine();

      System.out.print("Enter pickup location: ");
      String pickup = sc.nextLine();

      System.out.print("Enter destination: ");
      String destination = sc.nextLine();

      System.out.print("Enter distance in km: ");
      double distance = sc.nextDouble();

      if (distance <= 0) {
         System.out.println("Invalid distance.");
      } else {
         double baseFare = 50.0;
```

```
        double ratePerKm = 12.0;
        double fare = baseFare + (distance * ratePerKm);

        System.out.println("\n--- Ride Details ---");
        System.out.println("Passenger: " + name);
        System.out.println("Pickup: " + pickup);
        System.out.println("Destination: " + destination);
        System.out.println("Distance: " + distance + " km");
        System.out.println("Total Fare: Rs. " + fare);

        System.out.print("Confirm ride? (yes/no): ");
        String confirm = sc.next();

        if (confirm.equalsIgnoreCase("yes")) {
            System.out.println("Ride booked successfully!");
        } else {
            System.out.println("Ride booking cancelled.");
        }
    }

    sc.close();
  }
}
```

INPUT :

```
Enter passenger name: Ravi
Enter pickup location: College
Enter destination: Railway Station
```

Enter distance in km: 10

Confirm ride? (yes/no): yes

OUTPUT :

--- Ride Details ---

Passenger: Ravi

Pickup: College

Destination: Railway Station

Distance: 10.0 km

Total Fare: Rs. 170.0

Ride booked successfully!
