TASK – 1

Salary Transformation System Using Functional Programming Technique in Java

PROGRAM :

```
import java.util.Scanner;
import java.util.function.Function;

public class SalaryTransformation {
   public static void main(String[] args) {
      Scanner sc = new Scanner(System.in);

      System.out.print("Enter employee name: ");
      String name = sc.nextLine();

      System.out.print("Enter basic salary: ");
      double salary = sc.nextDouble();

      Function<Double, Double> increment =
            s -> s * 0.10;

      Function<Double, Double> finalSalary =
            s -> s + increment.apply(s);

      double increase = increment.apply(salary);
      double total = finalSalary.apply(salary);

      System.out.println("\n--- Salary Details ---");
```

```
        System.out.println("Employee Name: " + name);
        System.out.println("Basic Salary: " + salary);
        System.out.println("Salary Increment: " + increase);
        System.out.println("Final Salary: " + total);

        sc.close();
    }
}
```

INPUT :

Enter employee name: Ravi

Enter basic salary: 30000

OUTPUT :

--- Salary Details ---

Employee Name: Ravi

Basic Salary: 30000.0

Salary Increment: 3000.0

Final Salary: 33000.0
